

Public Consultation on the Debt-Equity Bias Reduction Allowance (DEBRA)

With both private bond and equity markets playing a crucial role in financing the post-Covid19-pandemic recovery, we strongly welcome the European Commission's intention to support and increase equity financing of the private sector.

- The current funding structure of European (non-financial & financial) companies is mostly reliant on debt financing, rather than equity financing, leaving European companies potentially more vulnerable in economic downturns. Dependent on its final design, the DEBRA-initiative of the European Commission can be a positive step towards our common goal of a better functioning Capital Markets Union and accelerating investment in companies of all-sizes.
- However, for the DEBRA to truly achieve effective support for European companies, at both SME and MNE level, the proposal needs to provide clear incentives for companies to change their investment strategy. Companies choose debt financing for a number of economic reasons, other than tax, and introducing a DEBRA may not substantially change this situation. In particular, a too narrow base for the DEBRA will not generate much encouragement to use the allowance and putting in place excessively stringent rules will further undermine DEBRA's intention to boost equity financing.
- Regardless of the final design of the DEBRA proposal, interest deductibility must remain in place as a fundamental part of the corporate tax system. A removal of the interest deductibility would inevitably raise the overall cost of capital, reducing investment, and harming labour productivity and wages¹. Equity and debt financing are both complementary methods of financing, each with their own advantages and disadvantages and they should both be favoured as part of a pro-growth agenda for EU companies. Thus, the DEBRA proposal should not be as such about limiting debt financing but rather about boosting equity financing.

General context

The lack of deductibility for the cost when an investment is financed through equity financing creates serious distortions and may lead to double taxation of the investor income. This should be addressed, preferably at the corporate level but if that is not possible, at the investor level. The debt-equity bias is aggravated by a higher statutory corporate tax rate, an increase in the inflation rate or interest rates. A reduction of the corporate tax rate would be the most general measure to reduce the debt-equity bias.

¹ We would like to refer in this context to the De Mooij & Devereux study (2011) which assesses how a European-wide Allowance for Corporate Equity could lead to increase of 1.8% in GDP and 0.5% in employment, as opposed to a Comprehensive Business Income Tax (CBIT) system, which disallows interest deductibility, which would reduce EU GDP and employment. *De Mooij, R.A., Devereux, M.P. An applied analysis of ACE and CBIT reforms in the EU. Int Tax Public Finance 18, 93–120 (2011).*

<https://doi.org/10.1007/s10797-010-9138-8>

A DEBRA can limit a debt-equity bias in terms of tax, but other factors are influencing companies' decisions in this area, as the European Investment Bank² noted in 2018. As a result, if the DEBRA truly wants to make a difference for companies' financing options, the proposal would need to carry a sufficient level of scope and impact. In order for the DEBRA to reach its full potential, we would like to add the following comments:

Design of DEBRA

An allowance for corporate equity (ACE)³ can lead to a (short-term) fall in corporate income tax revenue. If this short-term fall is immediately set off by member states increasing their corporate tax rates, companies will be worse off in the end, with lower growth expectations, regardless of the DEBRA's scope or deduction rate. Whilst underlining that corporate tax revenue only represents a small share of total tax revenue and several studies have noted positive effects of an ACE on employment and wages (thus contributing in the long run to overall tax revenue), we can understand that, given the current Covid-19 pandemic, substantial losses in overall revenue should be avoided. Limiting the DEBRA to only cover new equity can be supported in this sense. However, where historic equity contributions already qualify for an ACE on national level that equity base should be grandfathered and continue to generate deductions under the historic rules. At the same time, it is likely that companies will continue to suffer considerable losses in the next few years as a result of the Covid-19 pandemic. If we want to make the DEBRA supportive also for loss-making companies, an ambitious carryforward rule should be envisaged due to the exceptional circumstances companies find themselves in today.

SMEs

Whilst separate tax rules for SMEs and MNEs should generally not be encouraged due to "threshold effects", we believe it is understandable, in this case, that SMEs would be granted a higher notional deduction percentage rate in a DEBRA.

With SMEs struggling in a post Covid-19 world, a DEBRA for SMEs should be part of a series of measures to boost financial market opportunities for SMEs. However, SMEs are certainly more prone to favour debt financing than MNEs, due to its simplicity and accessibility. Without a tax advisor in house, SMEs may not use a DEBRA at all, if the proposal is too complex with a number of difficult rules. While the proposal should be as simple as possible for companies of all sizes, it is clear that the higher the complexity of a DEBRA, the less likely SMEs will be to use it. We call on Member States to provide sufficient (administrative) guidance to SMEs when implementing a DEBRA at national level.

² https://www.eib.org/attachments/efs/economics_working_paper_2018_03_en.pdf

³ The European Commission mentions that 6 countries already have an ACE in place, although one could add the Latvian and Estonian tax system, which share similar characteristics.

Anti-Abuse Provisions

We would encourage the Commission first to look at the current anti-abuse provisions in place, in particular the ATAD, before putting an additional layer on top. For example, all EU countries already have a 30% of EBITDA interest deduction limitation⁴ as a result of ATAD (+ national rules on interest deductibility), which acts as both a defence against BEPS and as a brake on the debt-equity bias.

If the Commission believes however that additional measures should be taken, we would encourage the Commission to focus in particular more on anti-abuse provisions (such as a GAAR) rather than excluding items from the scope of the DEBRA. Of course, it is essential that the taxpayer always has the right to prove that any transaction is carried out for valid commercial reasons.

⁴ We would like to note in this context that during the height of the Covid-19 pandemic the EU kept its interest limitation rules unchanged despite the fact that e.g. the United States' Coronavirus Aid, Relief, and Economic Security (CARES) Act had provided more flexibility to their rules for both tax years 2019 and 2020, leading to a comparative disadvantage for European companies. An equally stringent application of DEBRA's rules during a significant economic crisis will do more harm than good.

Debt equity bias reduction allowance - public consultation

Fields marked with * are mandatory.

Introduction

The objective of the initiative is to introduce an allowance system for equity financing in order to mitigate the debt-equity bias induced by taxation, thereby reducing overall debt-leverage of companies and supporting the economic recovery from the COVID-19 crisis. The Commission services will explore different ways in which such an allowance could be designed and implemented as well as possible alternative options to achieve the same objectives. It will also explore how anti-tax avoidance rules linked to such allowance can be designed to ensure tax fairness and prevent the use of the allowance for unintended purposes.

The questionnaire should take about 30 minutes to complete. The questionnaire is accessible in English in the first instance, but will be made available in all official EU languages within two weeks. You can submit your reply in any of the official EU languages.

In addition to the introduction, the consultation is structured as follows:

The second part presents some general background information on the initiative.

The third part of the questionnaire asks for some background information about you, the respondent.

The fourth part covers the causes and consequences related to the tax based debt-equity bias.

The fifth part covers possible solutions to address those shortcomings.

The final section allows you to upload a position paper or any kind of document that you think is relevant to better explain your views.

Context

In the Communication Business Taxation for the 21st Century[1], the Commission announced a proposal to address the debt-equity bias in corporate taxation. The initiative would support the action plan for the Capital Market Union, which acknowledges that the corporate sector will enter the post-COVID recovery period with higher need for equity investment.[2]

Most current tax systems across the EU accept interest payments on debt as a deductible expense, reducing the tax base for the purpose of corporate income taxation. At the same time, the costs related to

equity financing are mostly not tax deductible. This asymmetric tax treatment of the costs induces a bias in investment decisions towards debt financing. This debt bias of taxation is a long-standing issue.

The tax induced debt-equity bias can contribute to an excessive accumulation of debt for non-financial corporations. Excessive debt levels make companies vulnerable to unforeseen changes in the business environment and increase their risk of insolvency. Necessary business restructuring following insolvency procedures often comes with considerable social costs in the form of mass layoffs. A large number of related non-performing loans can negatively affect financial stability. Total indebtedness of non-financial corporations amounted to almost EUR 14 trillion in 2019 or 99.8% of GDP in the EU-27.

Within the single market, excessive insolvencies and financial instability have the potential to spill over to other Member States and affect the EU as a whole. Following the COVID-19 health crisis and in the framework of the transition to a greener and digitalised economy, substantial equity financing is of central importance for a fast and sound recovery. Companies with a solid capital structure are less vulnerable to shocks and more prone to make investments and to take risks. This can positively affect competitiveness, growth and ultimately employment.

Six Member States (Belgium, Cyprus, Italy, Malta, Poland and Portugal) already have legislative measures in place to tackle the tax induced debt-equity bias. The measures differ in policy design but all provide for a tax allowance on equity.

In your view, how high **should** the proportion of debt compared to equity be for non-financial corporations in your country?

- Not more than 25%
- 25% - 50%
- 50% - 75%
- 75% - 100%
- 100% - 125%
- 125% - 150%
- 150% - 200%
- More than 200%

How much do you agree or disagree with the following reasons for enterprises to finance their investments through debt rather than equity.

Enterprises use debt to finance investments ...

	strongly agree	agree	neutral	disagree	strongly disagree	don't know
... to increase the return on equity.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... because they have no or only limited access to equity financing.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... because interest levels are low and thus debt financing is cheap.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... to diversify risk.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... to reduce their tax liabilities.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
... to avoid the dilution of voting rights of their main shareholders.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... for other reasons (dialog box with free text will open)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Do you think that enterprises in the EU should be encouraged to use less debt financing and more equity financing?

- strongly agree
- agree
- neutral
- disagree
- strongly disagree
- don't know

Do you have further points you would like to raise in relation to the indebtedness of the business sector in general or on the ratio of debt to equity specifically?

1000 character(s) maximum

Possible Solutions

Several Member States have introduced measures to limit the ratio of debt to equity by limiting the deductibility of interest payments. Other countries have introduced a tax allowance on equity to counter the debt-equity bias. This is often done by allowing the deduction of a notional interest rate on equity.

How much do you agree or disagree with the following statements about existing Member State measures to support equity financing?

National initiatives which tackle the tax debt-equity bias ...

	strongly agree	agree	neutral	disagree	strongly disagree	don't know
... are preferable to an initiative at the EU level since they can be better targeted to the needs.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... are creating difficulties for enterprises operating in the single market across countries.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... are a form of tax competition among countries.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

How much do you agree or disagree with the following statements about an EU initiative to mitigate the debt-equity bias?

An EU-wide initiative which tackles the tax debt-equity bias ...

	strongly agree	agree	neutral	disagree	strongly disagree	don't know
... would be a useful tool to support the recovery of companies from the COVID-19 crisis and incentivise investment through equity in the transition to a greener digitalised economy without creating distortions in the single market.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... would reduce tax competition among Member States.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... would be beneficial for enterprises operating in the single market across countries.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... is not necessary: the tax debt equity bias should be addressed at Member State level.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... is not necessary: there is no such thing as a tax debt-equity bias.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

The tax debt bias could be addressed via several possible policy options. When considering the options below, the respondent should assume that the overall

impact on the tax costs for corporations and tax revenues for Member States will be neutral, even though the possible offsetting measures remain at the discretion of each Member State. As an example, the policy option to mitigate the debt equity bias could be combined with a change in the corporate tax rate to ensure that the global impact on tax revenues of Member States and on tax costs for corporations is neutral.

In your view, which option would be best suited to address the debt-equity bias? Please rank the options from 1 (most suited option) to 4 (least suited option).

	1 (most suited option)	2	3	4 (least suited option)
Option 1: Disallow any financing costs as deductible expense.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Option 2: An allowance on equity that provides for the deductibility of a notional interest on all equity (maintaining the existing interest deductibility).	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Option 3: An allowance that provides for the deductibility of a notional interest on new equity (maintaining the existing interest deductibility).	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Option 4: An allowance on corporate financial capital (financial debt+equity) that would replace the tax deduction of interests.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
Option 5: other	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Following the European System of Accounts 2010, the working definition of equity is: “equity is a financial asset that is a claim on the residual value of a corporation, after all other claims have been met”. Do you consider this definition useful or would you propose an alternative definition?

- Definition useful
- Definition not useful, I would propose an alternative.

When a tax allowance for corporate equity is granted (as in policy options 2, 3 and 4), a notional interest rate needs to be determined. The notional interest rate will be determined based on a risk free market interest rate in order to take annual interest rates variations into account. In addition a risk premium can be added to the risk free rate for calculating the notional interest rate. How high do you think the notional interest rate should be?

The notional interest rate for an equity allowance should be:

- equal to the risk free interest rate + 0.5%
- equal to the risk free interest rate + 1%
- equal to the risk free interest rate + 1.5%
- equal to the risk free interest rate + 2%
- equal to the risk free interest rate + 2.5%
- equal to the risk free interest rate + 3%
- higher

Please explain your response and/or provide further comments.

500 character(s) maximum

In view of better addressing financing issues for Small and Medium Enterprises (SMEs), do you think that a more generous notional interest rate should be granted to SMEs?

- strongly agree
- agree
- neutral
- disagree
- strongly disagree
- don't know

Please explain your response and/or provide further comments.

500 character(s) maximum

How much higher do you think the notional interest rate should be for SME compared to the notional interest rate applied to larger enterprises?

- +0.5 percentage points
- +1 percentage point
- +1.5 percentage points
- +2 percentage points
- +2.5 percentage points
- +3 percentage points

- higher

How much higher do you think the notional interest rate for SMEs should be compared to larger companies?

100 character(s) maximum

For a tax allowance for corporate equity (options 2, 3 and 4 above), do you agree that such a proposal should include robust rules to protect it against being used for aggressive tax planning?

- strongly agree
- agree
- neutral
- disagree
- strongly disagree
- don't know

Please evaluate the following elements in terms of effectiveness to make an allowance for equity more resilient to tax avoidance by expressing you (dis-) agreement with the following statements.

In order to prevent abuse of an allowance for equity for aggressive tax planning purposes, it is necessary to ...

	strongly agree	agree	neutral	disagree	strongly disagree	don't know
... add a general anti-abuse provision that would deny notional deduction for operations carried out without any substantial economic purpose or carried out with related parties and that have the main purpose of converting old equity into new equity with the aim of benefiting from the notional deduction.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... exclude cascading through intra-group loans and loans involving associated enterprises;	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... exclude cash contributions and contributions in kind;	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

... exclude capital increase subscribed by the company or one of its subsidiaries (own shares);	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
... exclude intra-group transfer of participations;	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... prevent re-categorisation of old capital as new capital through liquidations and the creation of new companies;	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... exclude acquisitions of businesses held by associated enterprises	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
... exclude assets not linked to the activity	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Other (please specify)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Final remarks

You have the option to upload a brief document, such as a position paper in case you think additional background information is needed to better explain your position or to share information about data, studies, papers etc. that the European Commission could consider to prepare its initiative.

Please note that the uploaded document will be published alongside your response to the questionnaire, the latter being the essential input to this public consultation.

In case you have chosen in the section "About you" that your contribution shall remain anonymous, please make sure you remove any personal information (name, email) from the document and also from the document properties.

Please upload your file

Only files of the type pdf,doc,docx,odt,txt,rtf are allowed
